

Precise Grouting of Ceramic & Stone Flooring.

The Point Master is fast and effective for the precise application of grout for ceramic floor tiles. You no longer have to cover the whole floor in grout. This has a specific advantage for some floor tiles that have a porous or uneven surface, where grout can set and cure, thus staining the surface or the tile.

Not only is application time greatly reduced, but the entire process is less messy and there is less waste produced. Finishing time is hence reduced, leading to greater continuity and a better overall result.
