

## Re-Pointing Brick Walls & Brickwork Refurbishment.

The Point Master is extremely effective for the re-pointing of old brickwork, where the mortar has crumbled away. Because the Point Master is designed to fill from the back, the mortar joint is always completely filled ensuring the best repair possible.

When repairing or re-pointing, always remember to remove all the loose and powdery mortar back to a depth of 15 - 20mm, then dampen the brick cavity and existing mortar to ensure the best adhesion.
