Thor WHO60 Cementitious Grout Instructions
For Use In Conjunction With Thor Helical Reinforcement Bars

APPLICATIONS
Crack Stitching Repairs, Masonry Lintels, Remedial Masonry Reinforcement and Specific Wall Tie Applications.

FEATURES
A shrink compensated, two-part thixotropic cementitious grout, suitable for injection with a hand applicator.

DIRECTIONS FOR USE
Pour the liquid Part A into a clean pail and add the grout Part B slowly, blend (agitate) continuously with a power driven mixing paddle and mix thoroughly and continue blending (agitating) until a smooth creamy consistency is achieved.

For best results DO NOT HAND MIX!
Before adding grout to the barrel of the hand applicator ensure that the rubber flange is adjusted to be flush with the inside diameter of the plastic barrel for best injection results and to retard curing, make sure the barrel is clean of any contaminants before filling and use grout immediately after agitating.

If grout injection is interrupted for a short periods it is recommended to re-agitate the mix in a pail until a smooth consistency is achieved again to continue use.

CLEANING TIPS
Wash up in water and scrub applicator and barrel thoroughly with a hand brush.

MSDS is available upon request

• Thor Helical WHO60 Grout contains Portland cement.
• Contact with blended product may cause irritation, dermatitis or burns.
• Contact between the dry blended powder and body fluids, (e.g. perspiration), may cause irritation, dermatitis or burns.
• The use of suitable skin and face/eye protection is recommended and should eyes become contaminated flush thoroughly with clean water and seek medical advice.
Thor Helical Australia also recommends spraying the mortar bed joint with Thor bonding agent for maximum adhesion prior to applying WHO60 Grout also compatible with and enhances cement renders and toppings etc.
